## GRISWOLD 811 ROTATING ASSEMBLY

# GRISWOLD 811

### GRISWOLD'S STANDARD FEATURES STACK UP!

Griswold's shaft assemblies come pre-assembled with the shaft, inboard and outboard bearing, bearing housing, labyrinth seals, and miscellaneous parts in one package. All components are inspected and assembled to our strict OEM standards in our "clean room" to ensure long life and trouble free operation. Bearings are installed utilizing bearing induction heaters, eliminating stress caused by pressing bearings on and off. The Griswold shaft assemblies are available for the 811S, M, L or XL power frames with your choice of shaft configuration (sleeved design or solid shaft) and, of course, interchangeable with hundreds of thousands of pumps in use today.

Power frames, can be rebuilt in less time, with new components, and one box from the storeroom. Three bolts removed and the old rotating assembly comes out to be replaced with a brand new rotating assembly....

**you're done!**
