all things flow

seepex unique advantage to Shale Gas Water Management

seepex is strategically located on the west side of the Marcellus shale project, to support all pumping aspects of shale operations. We have unique capabilities for handling and processing a variety of materials related to oil & gas exploration.

Several types of water treatment methods are all serviced with seepex pumps, including: on site treatment, mobile treatment and dedicated treatment facilities.

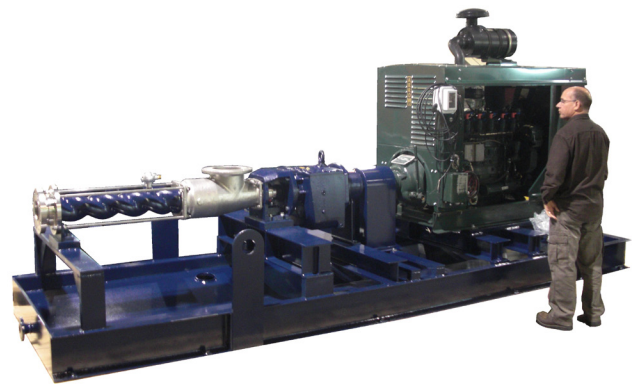

Small solution, big saving

seepex offers wide variety of constructions which are custom configured to fit your application. Hydraulic and diesel powered drives, along with Smart Conveying Technology and Evenwall stators are combined to form the best solutions for you.

seepex applications

- Flowback / Produced Water Treatment
- Chemical Metering
- Sludge Treatment
- Sludge Feed
- Solids Handling
- Drilling Mud Preparation
- Shaker Underflow
- Desanders / Desilters (discharge)
- Grout
